

GET A GRIP The UltraLatch door handle design is comfortable to use, reducing stress to wrists and arms with its push-pull operation that eliminates the need for rotation. It is a stylish alternative to bulky handles, which are more paddle-shaped and can cause pinching. The handle avoids this problem with a fast-action open and close, and by leaving sufficient clearance between knuckles and the door.

CLEAN SEEN The Clean-Trace Hygiene Management System gives users the data to make better decisions about cleaning. With real-time reporting, a user sees the hot spots within a health care facility and takes action to make it safer. The data also can enhance collaboration between departments, allowing everyone to work together toward a safer environment.

MULTIPLE BENEFITS Installed in new or existing HVAC systems, Steril-Aire's patented germicidal UVC keeps coils and drain pans clean, reducing an amplification source and a transport system contributing to the hospital bioburden. UVC may reduce health care-associated infection rates and improve patient outcomes and satisfaction.

A clean environment starts with the environment.

Every healthcare administrator knows that providing patients and visitors with a clean, safe environment is more important than ever. Now there is a building material that is as versatile and easy to work with as wood products, but is non-porous, environmentally stabilized and attractive enough for today's warm and contemporary facilities.

King Plastic polymer sheets are ideal for cabinets and furnishings, restroom and shower partitions, equipment carts, wet lab applications and more. They are also available with King MicroShield® antimicrobial, which helps products stay cleaner between cleanings and inhibits the growth of microorganisms, including bacteria, algae and fungi. King MicroShield provides permanent product protection without leaching into the environment or promoting resistant strains.

Contact us today for details, including a White Paper documenting King MicroShield's performance.

PRECISE OPTICALS The Chromophare F Generation LED surgical light elements are shaped through proprietary lenses and then projected into a full reflector system. The light is blended to ensure homogeneity, and then directed toward the surgical site via 650 overlapping beams of penetrating light. **Berchtold Corp.** • www.berchtold.biz

LIGHT THE WAY Utilizing advanced thin film LED Technology, Element Disc offers 3000K illumination and excellent light distribution in a sleek, slender profile. With a color-rendering index of 80, the unit uses several high-intensity micro LEDs that surround several layers of polycarbonate and optical films to create warm, glare-free light. **Humanscale** • www.humanscale.com

LIGHTING IN STYLE The Vela Chandelier is laser-crafted aluminum with 12 organic LED panels that illuminate surfaces below and 12 panels that shine upward for soft ambiance. The chandelier delivers a high light output of 2040 lumens, while offering a color rendering index of 80 and an efficacy of 35.2 lumens per watt. The luminaire has a correlated color temperature of 4000K while using 58 watts. **WAC Lighting** • www.waclighting.com

FLEXIBLE NETWORK The expanded Digital Lighting Management lighting control product line includes components that allow quick networking of room-based controls and lighting control panels for centralized monitoring, control and programming. Based on an open protocol, networked controls integrate with building automation systems and require only one connection point per room. **WattStopper** • www.wattstopper.com
