SYSTEM SOLUTION

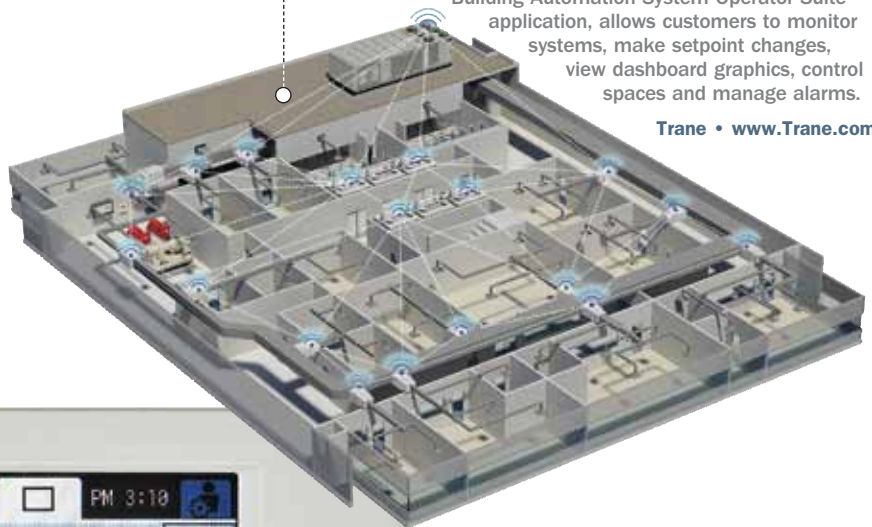

Vari-Flow integrated kitchen ventilation systems allow building owners and managers to reduce energy costs by more precisely modulating exhaust and supply airflows to match cooking operation demands. Temperature sensors located in the hood's capture area are directly exposed to quick changes in cooking activity that result in a faster response to cooking load changes.

IN COMMAND EarthWise Intelligent Variable Air Systems can improve HVAC system efficiency by 20 to 30 percent when compared with a traditional variable air-volume system. The system, which can be viewed on the Tracer Building Automation System Operator Suite application, allows customers to monitor systems, make setpoint changes, view dashboard graphics, control spaces and manage alarms.

STYLISH AND DURABLE

This new collection of textiles includes a new set of patterns called All Spaces for indoor and outdoor use, which also meet tough industry performance standards. Patterns Allover and Anywhere are sustainably woven in the United States with Sunbrella Contract yarns, offering enhanced durability, bleach cleanability and stain-resistance. The certified Greenguard finish is nontoxic and has low VOCs.

CURVES AHEAD Serpentina Waves is a curved, pre-engineered metal ceiling system that features large-scale panels and no visible grid. It is available in new corrugated panels that provide a custom look to ceilings in the form of a curved metal cloud with a wave or ripple profile. The ceiling system comes with standard ready-to-assemble components

Armstrong • www.armstrong.com

FLATTERING PATTERN The Graphix Color Collection is available on all of the company's easy-to-assemble metal architectural products, including column covers, dimensional and flat wall paneling, room dividers, wall art and table tops. The collection integrates signature grained metal surfaces with a new line of graphic patterns inspired by textile. The multilayered panels can be installed as decorative surface laminates.

LIGHT THE WAY Consisting of a precision monofilament fabric membrane stretched over an extruded aluminum frame, LightFrame provides modular, accessible panels that offer light transmission rates of at least 80 percent and noise reduction coefficient values of up to 90 percent. The fabric optimizes artificial and natural light transmission without color shift for even illumination.
